

Leverage smartphone use to improve math skills

New, innovative education app delivers math practice throughout the day.

Toronto, ON – July 13, 2016 -- Smartloq Math for Android is available now as the first release in a series of educational apps designed to keep users practicing, improving and building confidence all day long.

It is human nature that we start to forget almost instantly after we learn something new. This makes practice and review a vital though often unrealized part of the learning process for creating permanent knowledge. Smartloq takes a unique approach to ensure practice is a part of our daily routine by leveraging smartphone behaviour to seamlessly integrate micro-practice with other apps on our phones.

“As a lifelong learner, I had plenty of education apps on my phone for various subjects, but I could never find time or the motivation to use them regularly during the week. I needed a solution that didn’t require dedicated time but could keep me practicing no matter how busy or distracted I got” explains Greg Edmunds, founder and creator of Smartloq.

Smartloq Math functions effectively like a security lock for your apps, but rather entering a PIN, it requires users to answer a math question before launching an app it is applied to. By using this approach, Smartloq delivers practice questions via normal daily usage of a smartphone rather than requiring dedicated time. Considering how often we interact with our phones, Smartloq has significant potential to help users learn and retain subject matter through practice and repetition. Smartloq does not replace traditional studying, but rather expands the busy learner’s toolkit.

Getting started with Smartloq is simple by design. Users can quickly pair Smartloq to any apps on their phone and customize the type of questions they would like to focus on. Smartloq lets users track their statistics, review a full history log and has the option to create a security PIN for access to the main app. This enables parents to manage and lock the settings on their child’s smartphone, thus ensuring their children are practicing and improving their skills whenever they use their phone.

Smartloq Math is available for [download](#) on the Google Play Store. To learn more please visit <http://www.smartloq.com> or follow us on Facebook at www.facebook.com/smartloq.

About Quizode Inc.

Quizode Inc. is a mobile app development company focused on educational tools. Our goal is to advance the art of learning through innovative applications that integrate themselves into everyday routine.
